CARTER MOYER

Full-Stack Software Engineer | Software Developer | AI Developer

La Crosse, WI | (920) 904-2695 | hello@phoenixwebsites.ai
LinkedIn: linkedin.com/in/carter-moyer-66993b24a | GitHub: github.com/Carter-75 | Portfolio: carter-portfolio.fyi | Business: phoenixwebsites.ai

PROFESSIONAL SUMMARY

Full-Stack Software Engineer and Computer Science graduate (B.S., December 2026) who has already shipped 10+ live, deployed applications: client work through his own business plus full-scale personal projects built to production standards. Founder of Phoenix Websites AI, a web development business delivering custom websites, SaaS portals, dashboards, and AI products with authentication, Stripe payments, and automated contracts. AI Trainer at Outlier evaluating and debugging code and LLM outputs. Specialized in the MEAN stack (MongoDB, Express, Angular, Node.js) and modern JavaScript and TypeScript across React and Next.js. Uses AI as an accelerator while personally auditing and testing every line that ships.

EDUCATION

University of Wisconsin-La Crosse, La Crosse, WI

Bachelor of Science in Computer Science, December 2026

Relevant coursework: Software Engineering (MEAN-stack team project), Full-Stack Web Development, Database Systems, Data Structures and Algorithms, Operating Systems, Object-Oriented Design

EXPERIENCE

Founder and Full-Stack Software Engineer, Phoenix Websites AI, La Crosse, WI (Remote, US clients)

February 2025 - Present

- Founded and operate an AI-native web development business selling custom websites and full-stack web applications to small-business clients, with setup packages from $1,499 to $4,999 and managed care plans from $99/month
- Built the production client platform (Angular 21, Node.js, Express, MongoDB, Vercel): Google OAuth and local authentication, Stripe billing and webhooks, auto-generated contract PDFs on every purchase, token-gated client reviews, and scheduled jobs for renewals and refund checks
- Shipped 10+ live applications end to end (client sites through the business plus production-grade personal projects, all publicly deployed): requirements, system design, clean development, testing, CI/CD deployment, and support, with client sites typically delivered in 2 to 5 weeks
- Apply AI-assisted development (few-shot prompting, chain-of-thought decomposition, structured JSON outputs) and manually audit, refactor, and verify all generated code for type safety, security, and production reliability

AI Trainer and Code Evaluator, Outlier, Remote

November 2025 - Present

- Evaluate and debug complex code-related tasks, algorithms, and AI research prompts to improve large language model accuracy, assessing LLM outputs for logic, efficiency, and syntax correctness

PROJECTS

Dream Chat, dream-chat-tawny.vercel.app, GitHub: Carter-75/dream-chat

Angular 21, Express, Node.js, OpenAI API, Tailwind CSS, Vercel, PWA

- Built a public, no-login AI chat product grounded in a source-labeled knowledge base using keyword retrieval, so answers cite documented research instead of free generation; controlled AI cost with rate limits of 10/minute per IP, 50/day per IP, 500/day global

Enterprise Outreach Infrastructure, cold-emailing-website.vercel.app

Next.js 15, Node.js, MongoDB, RESTful APIs, GitHub Actions, AES-256-GCM Encryption

- Built a production outreach and inbox platform syncing two mailboxes through the Zoho Mail REST API every 15 minutes via GitHub Actions, with threading, attachment mirroring, and AES-256-GCM credential encryption

Appointment Booker, Software Engineering Team Project, University of Wisconsin-La Crosse

MongoDB, Express, Angular, Node.js (MEAN Stack), Evolutionary Development Model, Role-Based Access Control

- Built an appointment booking application in a 4-person team using an evolutionary development model, evolving a working prototype through successive versions and feedback cycles into the successfully delivered final product; designed one account per person with customer and provider views, seeded administrator access, and duplicate account handling
- Also built a hotel booking website entirely solo the previous year for a web development class, using the same evolutionary model and owning the whole stack from database to UI, so booking systems are proven work both independently and in a team

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java (3 years), Python, C, SQL, PowerShell, HTML5, CSS3

Frameworks and Libraries: Angular, React, Next.js, Node.js, Express, Mongoose ODM, Tailwind CSS, Playwright, Chart.js

Databases, Cloud, and DevOps: MongoDB, MySQL, RESTful APIs (REST), Git, GitHub, GitHub Actions, CI/CD (Continuous Integration and Continuous Deployment), Vercel, Netlify, Stripe API, OpenAI API

Engineering Practice: Object-Oriented Programming (OOP), Data Structures and Algorithms, System Design, Software Development Life Cycle (SDLC), Agile, Evolutionary Development, Automated Testing, Unit Testing, Code Review, Compilers, Automata Theory, DevSecOps, Authentication, Role-Based Access Control, AES-256 Encryption

AI: Prompt Engineering, Few-Shot Prompting, Chain-of-Thought, Structured JSON Outputs, LLM Evaluation, Context Grounding and Retrieval

CERTIFICATIONS

Microsoft Office Specialist, Excel, Word, and PowerPoint, verified on Credly
